AI Overview

You can uninstall Windows 11 version 26H2—which typically installs as an enablement package like **KB5121794**—through the Windows Settings app, Command Prompt, or Windows Recovery Environment.

Method 1: Uninstall via Settings

1. Press **Windows Key + I** to open **Settings**.
2. Click on **Windows Update** in the left or right menu.
3. Select **Update history**.
4. Scroll down to the *Related settings* section and click **Uninstall updates**.
5. Look for **Feature Enablement for Windows (Ge) – KB5121794** (or the corresponding 26H2 update entry).
6. Click **Uninstall** next to it, confirm the action, and **restart** your PC.

Method 2: Uninstall via Command Prompt

If the option does not appear in the Settings app, you can force removal via an elevated command line:

1. Right-click the **Start** button and select **Terminal (Admin)** or **Command Prompt (Admin)**.
2. Type the following command and press **Enter**:

```cmd
wusa /uninstall /kb:5121794
```

Use code with caution.

3. Follow the on-screen prompts and **restart** your computer.

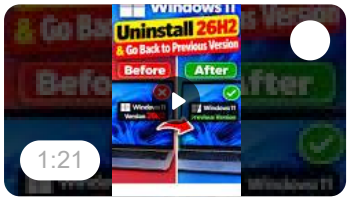

4. Verify the removal by pressing **Windows Key + R**, typing `winver.exe`, and hitting **Enter**.

Method 3: Uninstall via the Windows Recovery Environment (WinRE)

If your system is stuck or regular menus are inaccessible: Microsoft Learn +1

1. Restart your PC twice during the boot screen (or use **Settings > System > Recovery > Advanced startup** and click **Restart now**).
2. Navigate to **Troubleshoot** > **Advanced options** > **Uninstall updates**.
3. Select **Uninstall latest feature update** and let the process complete, then reboot. Microsoft Learn +2

Here is a short visual walkthrough demonstrating how to remove the Windows 11 26H2 enablement package through the Settings app:
