

Upgrade Your PC to Windows 11

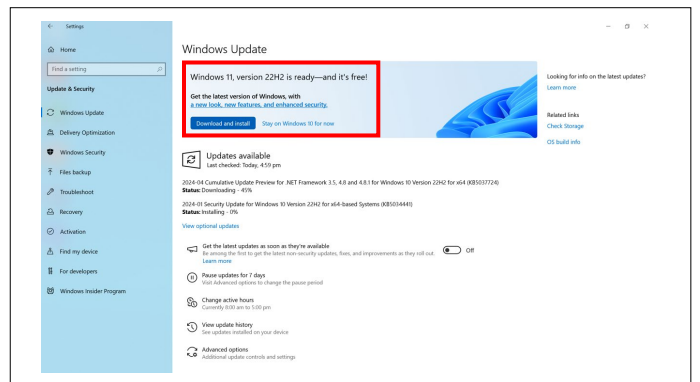

1 Click Start  and select '**Settings**'.

2 Click '**Update & Security**' from Windows Settings.

3 Click '**Check online for updates from Microsoft Update**'.

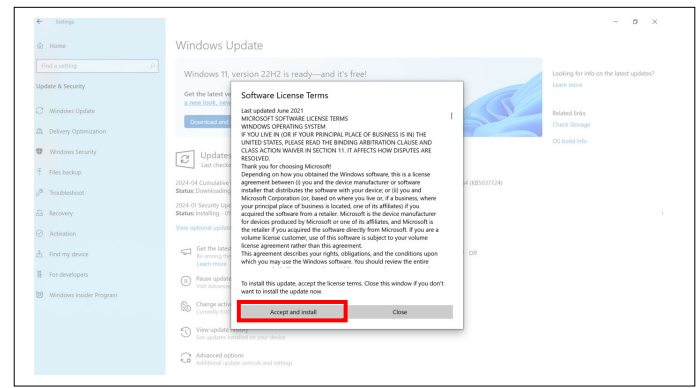

4 If Windows 11 is ready to be installed on the device, a message will appear indicating that the upgrade is available.

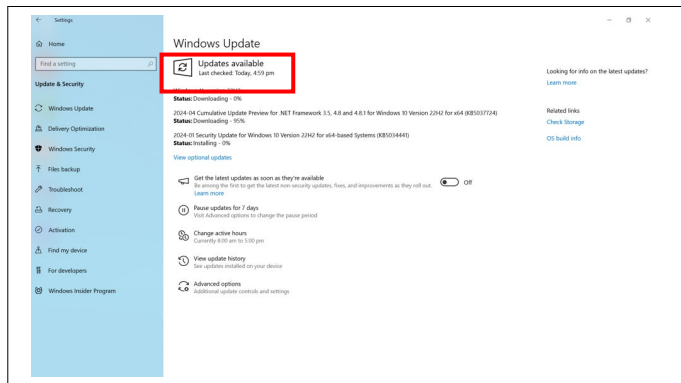

Note: If the circled message does not appear, you may need to update your Windows to the latest version and restart your device before upgrading to Windows 11. If the pop-up message still does not appear after updating, please submit [Software Installation Request Form](#) to request assistance.

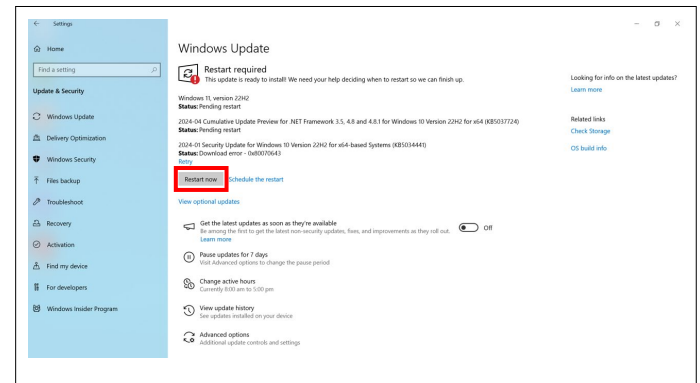

5 Click '**Download and install**' to start the upgrade.

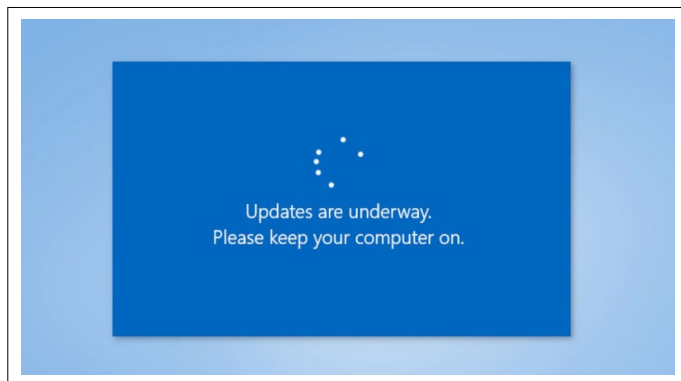

6 Read the Software License Terms and click '**Accept and install**' to proceed.

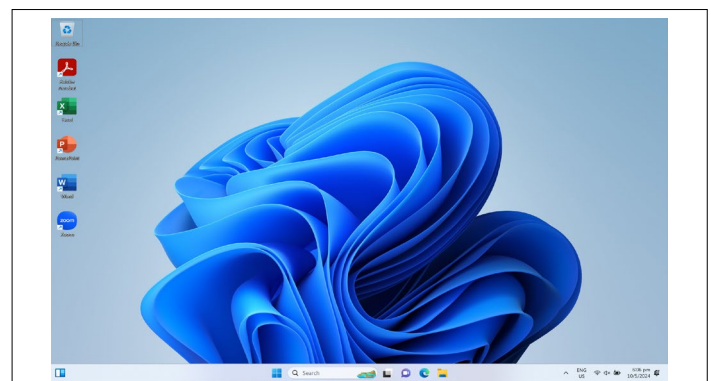

7 The system will then download and install the Windows 11 upgrade.

8 Once the installation is complete, click '**Restart now**' to restart the PC.

9 The PC may restart multiple times. Ensure it stays powered on throughout the entire process.

10 The upgrade was completed successfully.
